

Seamlessly Integrating Adagio with Manufacturing

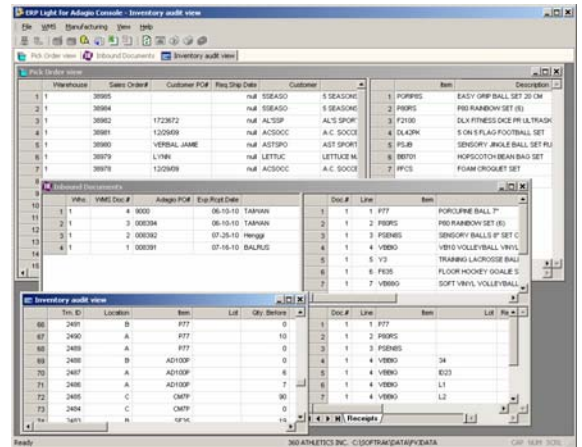

## Wireless Warehouse Management System for Adagio Accounting

This revolutionary product, exclusively designed for Adagio, is a sophisticated WWMS (Wireless Warehouse Management System) that integrates seamlessly with Adagio's Operational Suite. This unique product provides a complete inventory management and stock location solution for small to medium size businesses. No other solution on the market provides similar functionality. Data is entered in real time through barcode scanning and posted into Adagio OE/IC/Adagio PO. "WMS for Adagio" extends Adagio stock location functionality, making it modern, reliable and scalable information technology solution for wholesale/retail, distribution centre or manufacturing.

### System's Modules

- |                                       |                                     |
|---------------------------------------|-------------------------------------|
| WMS Console Application               | Mobile handheld device applications |
| View Sales/Pick Orders                | WH Pick                             |
